SUBJECT INDEX

Accuracy for mosaic focal planes, evaluation of peak location algorithms with subpixel, 288
Algorithm for detection and classification of targets, new, 249
Algorithms with subpixel accuracy for mosaic focal planes, evaluation of peak location, 288
Arrays using 12-bit digital electronics, real-time nonuniformity correction for focal plane, 210
Automatic classification of infrared ship imagery, 234
Automatic target acquisition, cultural feature and syntax analysis for, 270
Autonomous ship classification by moment invariants, 241

Bipolar incoherent spatial filtering, iterative design of pupil functions for, 66
Bridge classification by moment invariants, building and, 256
Bronchoscopic images, real-time digital processing of color, 172
Building and bridge classification by moment invariants, 256

Classification of infrared ship imagery, automatic, 234
Classification by moment invariants, autonomous ship, 241
Classification by moment invariants, building and bridge, 256
Classification of targets, new algorithm for detection and, 249
Clutter rejection for infrared surveillance sensors, 180
Clutter rejection signal processing for mid-infrared surveillance systems, simulation of, 192
Coherent optical processing of images, partially, 2
Color bronchoscopic images, real-time digital processing of, 172
Color video images, white-light prefiltering for real-time digital image transmission of still and moving, 73
Compression scheme, temporally adaptive hybrid optical/digital interframe, 77
Content analysis, surface location in scene, 133
Correction for focal plane arrays using 12-bit digital electronics, real-time nonuniformity, 210
Correction of pixel nonuniformities for solid-state imagers, 218
Cultural feature and syntax analysis for automatic target acquisition, 270

Design of pupil functions for bipolar incoherent spatial filtering, iterative, 66
Detection and classification of targets, new algorithm for, 249
Detection probability of an object ranking system for an imaging missile seeker, 264
Determination of planetary photometric functions, 116
Digital electronics, real-time nonuniformity correction for focal plane arrays using 12-bit, 210
Digital image processing and analysis during the 1970s, progress in, 94
Digital image processing in Europe: some highlights, 97
Digital image processing techniques, evaluation of optical and, 59
Digital image transmission of still and moving color video images, white-light prefiltering for real-time, 73
Digital interframe compression scheme, temporally adaptive hybrid optical/, 77
Digital processing of color bronchoscopic images, real-time, 172
Discriminant functions (SDFs), intra-class infrared (IR) tank pattern recognition using synthetic, 25
Discrimination for long range search/track infrared systems, spectral, 225
Duplication technique utilizing Fourier optics, novel image, 47

Edge operators, noise effects for, 277
Edge responses in phase imagery, impulse and, 86
Electronics, real-time nonuniformity correction for focal plane arrays using 12-bit digital, 210
Europe: some highlights, digital image processing in, 97
Evaluation of optical and digital image processing techniques, 59
Evaluation of peak location algorithms with subpixel accuracy for mosaic focal planes, 288
Experimental verification, multisensor image registration:, 160
Extraction by holographic filtering, parameter, 34

Feature and syntax analysis for automatic target acquisition, cultural, 270
Filtering, iterative design of pupil functions for bipolar incoherent spatial, 66
Filtering, parameter extraction by holographic, 34
Fire management applications, processing infrared images for, 127
Focal plane arrays using 12-bit digital electronics, real-time nonuniformity correction for, 210
Focal planes, evaluation of peak location algorithms with subpixel accuracy for mosaic, 288
Fourier optics, novel image duplication technique utilizing, 47

Holographic filtering, parameter extraction by, 34
Hybrid optical/digital interframe compression scheme, temporally adaptive, 77

Image duplication technique utilizing Fourier optics, novel, 47
Image processing and analysis during the 1970s, progress in digital, 94
Image processing and analysis of Saturn's rings, 110
Image processing in Europe: some highlights, digital, 97
Image processing techniques, evaluation of optical and digital, 59
Image registration: experimental verification, multisensor, 160
Image transmission of still and moving color video images, white-light prefiltering for real-time digital, 73
Imagers, correction of pixel nonuniformities for solid-state, 218
Imagery, automatic classification of infrared ship, 234
Imagery, impulse and edge responses in phase, 86
Images for fire management applications, processing infrared, 127
Images, optical processing of photographic, 9
Images, optical reconstruction of phase, 39
Images, partially coherent optical processing of, 2
Images, real-time digital processing of color bronchoscopic, 172
Images, signal processing for staring infrared, 204
Imaging missile seeker, detection probability of an object ranking system for an, 264
Importance of being positive, the, 151
Impulse and edge responses in phase imagery, 86
Incoherent spatial filtering, iterative design of pupil functions for bipolar, 66
Infrared images for fire management applications, processing, 127
Infrared images, signal processing for staring, 204
Infrared ship imagery, automatic classification of, 234
Infrared surveillance sensors, clutter rejection for, 180
Infrared surveillance systems, simulation of clutter rejection signal processing for mid-, 192
Infrared systems, spectral discrimination for long range search/track, 225
Interframe compression scheme, temporally adaptive hybrid optical/digital, 77
Intra-class infrared (IR) tank pattern recognition using synthetic discriminant functions (SDFs), 25
Invariants, autonomous ship classification by moment, 241
Invariants, building and bridge classification by moment, 256
Iterative design of pupil functions for bipolar incoherent spatial filtering, 66

Light prefiltering for real-time digital image transmission of still and moving color video images, white-, 73
Location algorithms with subpixel accuracy for mosaic focal planes, evaluation of peak, 288
Location in scene content analysis, surface, 133
Long range search/track infrared systems, spectral discrimination for, 225

Management application, processing infrared images for fire, 127
Missile seeker, detection probability of an object ranking system for an imaging, 264
Moment invariants, autonomous ship classification by, 241
Moment invariants, building and bridge classification by, 256
Mosaic focal planes, evaluation of peak location algorithms with subpixel accuracy for, 288
Moving color video images, white-light prefiltering for real-time digital image transmission of still and, 73
Multisensor image registration: experimental verification, 160

New algorithm for detection and classification of targets, 249
1970s, progress in digital image processing and analysis during the, 94
Noise effects for edge operators, 277
Nonuniformities for solid-state imagers, correction of pixel, 218
Nonuniformity correction for focal plane arrays using 12-bit digital electronics, real-time, 210
Novel image duplication technique utilizing Fourier optics, 47

Object ranking system for an imaging missile seeker, detection probability of an, 264
Operators, noise effects for edge, 277
Optical and digital image processing techniques, evaluation of, 59
Optical/digital interframe compression scheme, temporally adaptive hybrid, 77

Optical processing of images, partially coherent, 2
Optical processing of photographic images, 9
Optical reconstruction of phase images, 39
Optics, novel image duplication technique utilizing Fourier, 47

Parameter extraction by holographic filtering, 34
Partially coherent optical processing of images, 2
Pattern recognition using synthetic discriminant functions (SDFs), intra-class infrared (IR) tank, 25
Peak location algorithms with subpixel accuracy for mosaic focal planes, evaluation of, 288
Phase imagery, impulse and edge responses in, 86
Phase images, optical reconstruction of, 39
Photographic images, optical processing of, 9
Photometric functions, determination of planetary, 116
Pixel nonuniformities for solid-state imagers, correction of, 218
Planetary photometric functions, determination of, 116
Prefiltering for real-time digital image transmission of still and moving color video images, white-light, 73
Probability of an object ranking system for an imaging missile seeker, detection, 264
Processing infrared images for fire management applications, 127
Progress in digital image processing and analysis during the 1970s, 94
Pupil functions for bipolar incoherent spatial filtering, iterative design of, 66

Ranking system for an imaging missile seeker, detection probability of an object, 264
Real-time digital image transmission of still and moving color video images, white-light prefiltering for, 73
Real-time digital processing of color bronchoscopic images, 172
Real-time nonuniformity correction for focal plane arrays using 12-bit digital electronics, 210
Recognition using synthetic discriminant functions (SDFs), intra-class infrared (IR) tank pattern, 25
Reconstruction of phase images, optical, 39
Registration: experimental verification, multisensor image, 160
Rejection for infrared surveillance sensors, clutter, 180
Rejection signal processing for mid-infrared surveillance systems, simulation of clutter, 192
Responses in phase imagery, impulse and edge, 86

Saturn's rings, image processing and analysis of, 110
Scene content analysis, surface location in, 133
Seeker, detection probability of an object ranking system for an imaging missile, 264
Sensors, clutter rejection for infrared surveillance, 180
Ship classification by moment invariants, autonomous, 241
Ship imagery, automatic classification of infrared, 234
Signal processing for mid-infrared surveillance systems, simulation of clutter rejection, 192
Signal processing for staring infrared images, 204
Simulation of clutter rejection signal processing for mid-infrared surveillance systems, 192
Solid-state imagers, correction of pixel nonuniformities for, 218
Spatial filtering, iterative design of pupil functions for bipolar incoherent, 66
Spectral discrimination for long range search/track infrared systems, 225
Staring infrared images, signal processing for, 204
Still and moving color video images, white-light prefiltering for real-time digital image transmission of, 73
Subpixel accuracy for mosaic focal planes, evaluation of peak location algorithms with, 288
Surface location in scene content analysis, 133
Surveillance sensors, clutter rejection for infrared, 180
Surveillance systems, simulation of clutter rejection signal processing for mid-infrared, 192
Syntax analysis for automatic target acquisition, cultural feature and, 270
Synthetic discriminant functions (SDFs), intra-class infrared (IR) tank pattern recognition using, 25

Tank pattern recognition using synthetic discriminant functions (SDFs), intra-class infrared (IR), 25
Target acquisition, cultural feature and syntax analysis for automatic, 270
Targets, new algorithm for detection and classification of, 249
Temporally adaptive hybrid optical/digital interframe compression scheme, 77
Transmission of still and moving color video images, white-light prefiltering for real-time digital image, 73
12-bit digital electronics, real-time nonuniformity correction for focal plane arrays using, 210

Video images, white-light prefiltering for real-time digital image transmission of still and moving color, 73

White-light prefiltering for real-time digital image transmission of still and moving color video images, 73
